BLISS BALL TRANSFER UNIT

The Bliss Ball Transfer Unit is the easy cordless/airless workstation. Simply set it anywhere you want to work on a flat surface or existing techbench. The simple red lever on the front raises and lowers the table. With the balls up, you can easily rotate what ever you have sitting on the Ball Transfer Unit. With the balls down the item you are working on sits firmly on a flat surface and will not slide around.

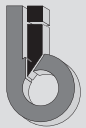

This is ideal for computer chassis assembly and repair. Configuration of PC boards into a rack system. Testing, labeling etc. Works perfectly with tray or pallet based manufacturing lines. Can be used for any application that needs to be easy rotated.

The Ball Transfer Unit comes completely assembled and ready to use, weights only 80lbs. and will easily handle 150 lbs. load capacity.

Comes with ESD banana outlet plugs on the front and the back. Finished with ESD conduction Powder coating.

A Step Towards Lean Manufacturing
